

STATE OF THE INDUSTRY

Supply Chains 2022

Introduction

About this report

In the following pages, we will give you a quick snapshot into the ever-changing field of supply chain, whose current state is being impacted rapidly by a variety of factors, from consumer behavior to agriculture and mobility. The moment we have been waiting for has come: sustainability and offsetting our carbon footprint is front and center for large organizations. In strategy, in research and development, and all across the supply chain – sustainability is an integral pillar for a successful and innovative future; just ask PepsiCo and ABInBev. We at SAP.iO, the innovation arm of SAP, an enterprise software company that helps clients build resilient supply chains, and Good Company, a Mission-Driven VC fund based in Tel Aviv, Israel, have mapped out the latest technologies and hottest trends that are shaking up the supply chain sector.

We invite you to utilize this report to stay up-to-date on the latest trends, validate your current and future investments and ventures, and for those of you who are building out your own resilient supply chain, be inspired.

About SAP.iO

SAP.iO is SAP's strategic business unit to incubate, accelerate and scale startup innovation and explore new business models for SAP. Since 2017, SAP.iO has helped 330+ external startups and internal ventures both start and scale their businesses while enabling thousands of SAP customers to access innovation.

SAP.iO Foundries is SAP's global network of equity-free startup accelerators that are the fastest way for founders to launch a relationship with SAP. SAP.iO Foundries provides technical and go-to-market support to help startups integrate with SAP and accelerate their entry into a curated inclusive ecosystem whose offerings can be easily accessed and deployed by SAP customers. SAP.iO currently has 10 Foundries located in San Francisco, New York, Berlin, Munich, Paris, Tel Aviv, Singapore, Tokyo, Bangalore, and Shanghai.

About Good Company

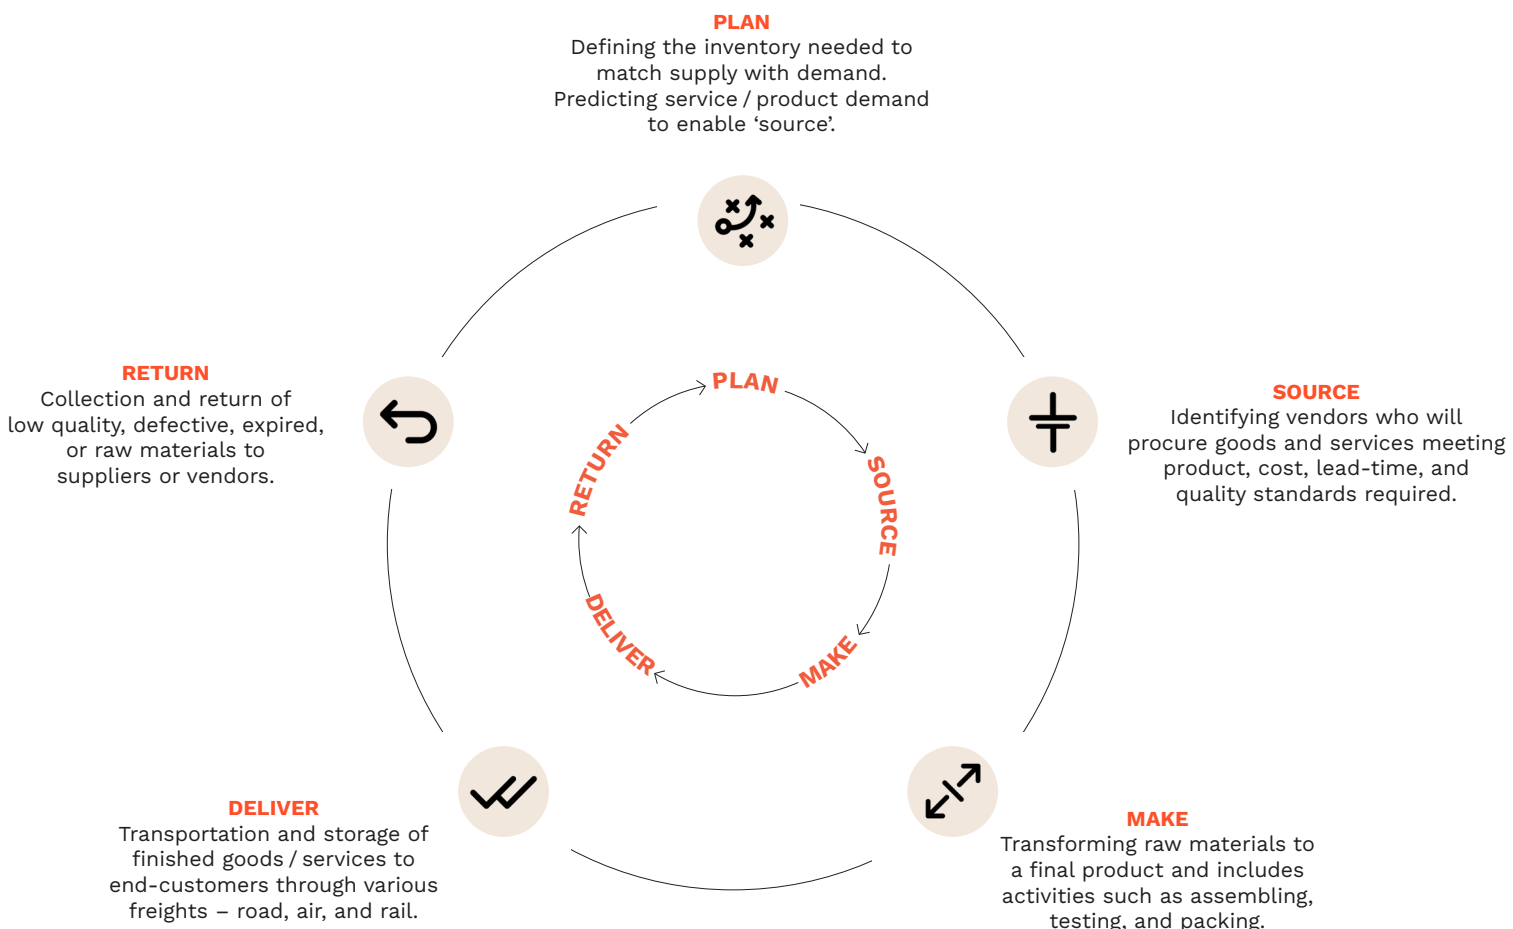

Good Company is a Mission-Driven VC based in Tel Aviv, Israel. GC is investing in early-stage, software-centric companies that leverage technology to solve the world's biggest problems. GC has developed a method to "reverse engineer venture capital" by partnering with multinational corporations to deeply understand the market needs in areas like Agriculture, Future of Work & Education, Circular Economy, Digital Health and more.

The Future of Supply Chains is Going to Be Circular, Sustainable, and Visible

Supply chains today are more critical than ever. Fragmented supply chains and a global pandemic drive organizations to react for today and solve for the future. The magnitude of the problems became evident when 95% of Fortune 1000 reported supply chains disruptions during the pandemic¹.

From the fuel to run our cars to the food on our plates, each product in its life cycle travels by air, land, or water. The story of supply chain is the story of human development. With the logistics industry alone estimated at \$8.6T² and rising at a 7.25% CAGR by 2030³, the potential is immense.

The future of supply chains is circular, sustainable, and resilient. Preparing for a changing physical environment and an ethical chain will require a revamp of every stage, from design to collection.

¹ Supply chain disruption, In the eye of the storm (Accenture, 2020)

² Logistics industry worldwide (Statista report, 2021)

³ Logistics Market Information Report: By Transportation Type (Market Research Future, 2021)

"The past two years have revealed the need for resiliency in the supply chain. SAP is helping companies to realize this by helping them increase agility to sense, predict, and respond to market developments, combine manufacturing automation with business execution, and become more sustainable by maximizing reuse and minimizing waste of materials from design to operations."

Franz Hero, Global Head of Digital Supply Chain Development at SAP

"Sustainability is an extremely important topic for us. Investors, consumers, and regulators are on the lookout."

Anna Farberov, General Manager, PepsiCo Labs, Global Venture and Innovation

Future Trends

Time to Build Resilience

From Linear to Circular: The Future of Products

With global population growing yearly at a 1% rate⁴, designing, building, collecting, and reusing is at the core of how we prepare for the future. Balancing the preservation of our lands, oceans, and natural resources for generations to come with matching consumer demand will be key.

 Ab InBev has launched **this** project to tackle waste reduction.

Sustain the Chain: Seaborne and Road Freight Emission Challenge

The race for green growth is on. According to Gartner, 54% of customers will only do business with companies practicing environmental sustainability⁵. Seaborne trade represents 3% of global emissions, emitting 300 million tons CO₂⁶ per year and growing at 2.4% (between 2022 to 2026)⁷. Road freight emitting 5% of global emissions⁸ and is expected to grow by 90% in 2050, compared to 2020⁹.

 Check out Maersk's **approach** to decarbonizing ocean transport.

Enter the Metaverse: Digital Twins

From product design to manufacturing, digital twins will bring collaborations to another level. Supply chain lead times and transparency are about to cash in, as consumers could better track and react to delays and labor working conditions.

 See how BMW and NVIDIA **partner** to change vehicle development

Trust 2.0: Decentralized Trust Through Blockchain

Visibility and agility across the entire supply chain will play a primary goal for organizations. Capgemini found that a mere 6% of all companies report full visibility across their supply chain and are prepared for a crisis¹⁰.

 Merck securing medicines' supply chain through **blockchain**

Age of Prediction: Machine Learning and Supply Chain Optimization

Identifying new patterns in data has the potential to revolutionize any industry. Supply Chain is no different. From predictive asset maintenance and supplier performance tracking to automated quality inspections and improved forecasting. Cost savings and customer satisfaction awaits those who take the leap.

 UPS uses **predictive analytics** to gain flexibility at scale

Man and Machine: Automation

With the explosion in the e-commerce industry worldwide and the demand for efficient operations, the logistics automation market alone is expected to grow at a 12.4% CAGR by 2026¹¹. From trucks to warehouses to ships and ports, automation is revamping every step in the chain.

 Walmart **transforms** its warehouses with automation technology

Company Highlights

Good Company and SAP.iO

TULU provides a full and unique solution for accessing shared products to all occupants of the residential building using advanced technology. TULU designs and fits out a TULU room in a space provided by the building, customizes the proprietary TULU app. The outcome is a new way of living, encouraging more responsible consumption, reducing the cost of living in the city, and consistent with the trend to smaller and smaller living spaces.

ReturnGO is an AI-driven return management platform that already serves more than 500 merchants to solve the problem of costly product returns and its associated wasted product – a major pain in the e-commerce world.

Procsea builds a simple, robust and sustainable fresh food industry by connecting businesses together through technology. The software is used by large retailers and wholesalers to help them streamline sales and purchasing processes while improving data exchanges and products traceability.

GrainChain is solving the biggest problems facing supply chains. Our blockchain and IoT-based suite of products allows all participants to trace, verify, and exchange commodities from field to market. GrainChain has offices in the US, Mexico, Central America, and is expanding into South America.

NWO.ai is an intelligence amplification platform that harnesses machine learning techniques and human metadata to identify global cultural shifts early and throughout the lifecycle of trends, across various sectors, ranging from consumer products to global war & conflict.

ChAI predicts raw material prices through a combination of AI and alternative data. Our goal is to assist purchasing and finance teams at global manufacturers with exposure to commodity prices to understand market volatility, manage their price risk and thereby reduce costs.

Winddle offers a unique end-to-end and agile approach of sourcing and supply chain management, unifying data & streamlining collaboration between all teams and partners, from order to delivery. The platform is used by companies in Retail, Luxury and Industry, with more than 3800+ connected suppliers.

"Progress requires bold ideas and deviation from the norms. You have to think outside the box and beyond the boundaries while aiming for validity today and soundness tomorrow."

Ezgi Barcenas, Chief Sustainability Officer, AB InBev
